

# Mega G+ 1.7

Updated: 7/21/2019

The Mega G+ 1.7 cars were first released in 2015. The chassis material is nylatron and it uses Level 30 Neodymium traction magnets. This is the third iteration of the Mega-G 1.7" wheelbase chassis. It builds on the earlier versions but is improved with lower traction magnets, a can motor (FN20) for greater reliability, redesigned stronger pickup shoes with a redundant power path to the motor, high carbon content brushes, guide pin moved forward and a lighter chassis. This chassis will fit most of the former long wheelbase Mega-G bodies with the exception of the formula cars and the Audi LMP cars. The new formula bodies will fit the older Mega-G 1.7 chassis. NOTE: This chassis runs best when using a 120 ohm controller. The older 70 ohm controllers for the Mega-G cars will not be as sensitive for this chassis.

Data were compiled from many sources including internet searches and AFX Racemasters. The data presented here are correct to the best of my knowledge, but there are no guarantees all of it is accurate. Not all releases may be listed. There may also be cars released in a different country (Japan, Australia, etc.) that show up for sale occasionally. These may not be listed here. Second Column Codes: G= GT type cars, N = Stock cars, I = Indy type cars, S = Street cars.
