# Circuits

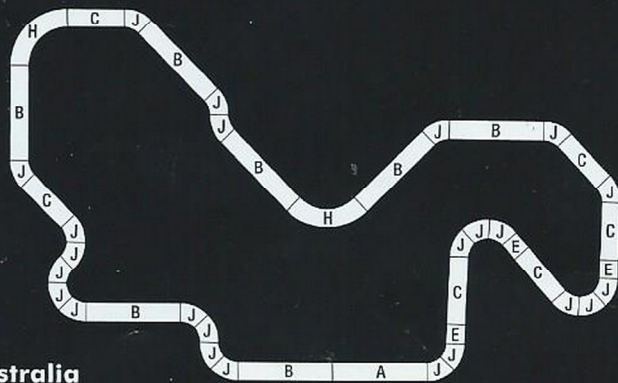

## Alternative Circuits You Can Build

Once you have purchased your initial set, many variations and layouts of up to 10 lanes of exciting racing are possible, by adding the many tracks and accessories available. Build a layout with long straights, tight corners and banked curves. Use your imagination to build a replica of almost any circuit. Some layouts for 2, 4, 6 and 8 lane circuits are shown in the next pages.

For each two lanes of racing circuit an Aurora AFX Power Pack (240V-16V) and one 15" Terminal Track are required.

The circuits detailed here are approximate replica's of the actual circuits, to give the experience of cornering, acceleration and high speed straightways just like real racing.
