AFX™

MODEL MOTORING®

SOUND UNITS INSTRUCTIONS

Your new AFX SOUND UNITS are designed to give you the sound of authentic car racing in your own home. It is recommended that these units be placed separately along your

layout, for better sound distribution. Sound Units will emit sound only when "switch," under bottom of each Sound Unit, is turned ON and a car is in the SLOT on the tracks.

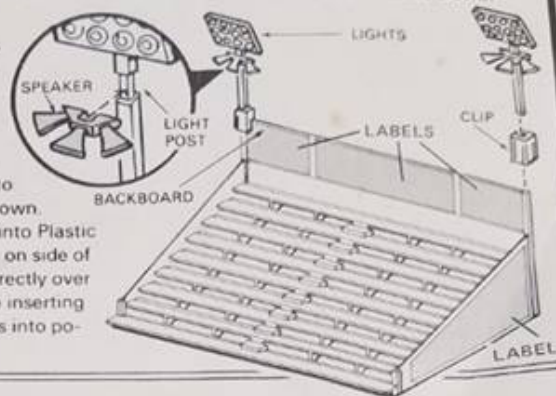

LABEL APPLICATION

The enclosed LABEL SHEET includes enough LABELS for both SOUND UNITS. Peel LABELS from Label sheet and press them on Sound Units at random noting various Labels in position as shown in illustration at right.

SPEAKER and LIGHT ASSEMBLY

- A Snap SPEAKERS on to LIGHT POSTS, as shown.
- B Insert LIGHT POSTS into Plastic CLIPS, noting SLOTS on side of CLIPS should align directly over BACKBOARD before inserting completed assemblies into position as shown.

WIRING FOR STANDARD AFX CARS ONLY

Check the parts list on your individual Track Layout Sheet to determine the type of cars included in your set, before wiring the Sound Units.
