

Mega G+ 1.5

Updated: 02/20/2025

The Mega G+ 1.5 cars were first released in 2015. The chassis material is nylatron and it uses Level 30 Neodymium traction magnets. This is the second iteration of the Mega-G 1.5" wheelbase chassis. It builds on the earlier version but is improved with lower traction magnets, a can motor for greater reliability, a redundant electrical path to the motor, redesigned pickup shoes and a lighter chassis. It will fit most of the previous short wheelbase bodies. NOTE: This chassis runs best when using a 120 ohm controller. The older 70 ohm controllers for the Mega-G cars will not be as sensitive for this chassis

Data were compiled from many sources including internet searches and AFX Racemasters. The data presented here are correct to the best of my knowledge, but there are no guarantees all of it is accurate. Not all releases may be listed. There may also be cars released in a different country (Japan, Australia, etc.) that show up for sale occasionally. These may not be listed here. Second Column Codes: G= GT type cars, N = Stock cars, I = Indy type cars, S = Street cars.
